

Quick Debrief

Goal: Capture immediate, instinctive reflections on the interaction.the way interactions unfold.

What was your first reaction to that interaction?

Did it feel natural or awkward? Why?

What was one unexpected thing that happened?

Critical Analysis - Designer

Encourage higher-order thinking by analysing usability, assumptions, and unintended consequences.

Did the interaction go as you expected? Why or why not?

What did the user struggle with the most?

What assumptions did you make about how people would use this device?

How can the device provide clearer feedback to the user to improve understanding and ease of use?

What design changes could make interactions feel more intuitive and natural for a wider range of users?

Critical Analysis - Device

Encourage higher-order thinking by analysing usability, assumptions, and unintended consequences.

How well did the device behave as intended?

What did the user do that you didn't expect?

If this were a real device, what issues would need to be fixed?

How can the device provide clearer feedback to the user to improve understanding and ease of use?

What design changes could make interactions feel more intuitive and natural for a wider range of users?

Critical Analysis - User

Encourage higher-order thinking by analysing usability, assumptions, and unintended consequences.

How did your character's traits and impairments affect your interaction?

What was frustrating or confusing? Why?

Did you feel in control of the device, or did the device control you?

How can the device provide clearer feedback to the user to improve understanding and ease of use?

What design changes could make interactions feel more intuitive and natural for a wider range of users?
